

SKYFORCE®

GLASS RAILING WITH SIDE PROFILE

SKYFORCE® is a new Glass Railing made for windows with a classic and timeless design. This solution is almost invisible, very easy to build, it ensures the safety of its users and prevents them from falling through it.

Skyforce® is compatible with any types of profiles. It is suitable for an assembly directly on a window frame or on the wall.

This new glass railing system includes an **EVA laminated glass** which is hydrophobic and do not present any risk of delamination over time. These glasses are therefore suitable for an exterior use in a humid environment without handrail to protect its sides.
