

## CLARITY® ANTI-REFLECTIVE GLASS

Glares and reflections that are naturally present on a glass surface are an obstacle to a clear view.

Guardian's Clarity™ anti-reflective glass is the best solution against unwanted reflections and offers a clear and pure view.

The anti-reflective glazing is designed using sputter coating technology.

It is ideal for applications where reflections and glares must be eliminated, such as a display case that reflects light and external objects.

### ADVANTAGES

- Outstanding optical properties
- The residual reflection of this glass is blue. This glass offers therefore maximum transparency and a high aesthetic appeal.

### APPLICATIONS

- Museum or jewellery display cases
- Showcases
- Shop window
- Automobile dealer windows
- Restaurants
- Control towers
- Sports facilities
- Zoological garden and aquariums

### AVAILABLE IN TEMPERED OR LAMINATED

This glass can be processed into tempered or laminated glass for applications requiring safety glass.
